《第四届土木工程结构生命周期国际学术会议论文集(英文版)》 内容简介: The objectives of the symposium are to provide art exhibition platform for the latest

research progresses on the lifetime engineering of civil infrastructure, which have been achieved by scholars, researchers and the technical personnel in structural engineering. It also aims to highlight the exchange in terms of lifetime engineering of civil infrastructure, structural reliability and durability analysis, performance-based structural design and analysis, management of infrastructure, disaster prevention and reduction, and structural health monitoring and condition assessment. It still aims to study and discuss the new techniques and technologies applied in the sustainable development of major infrastructure and hence to promote the international cooperation and exchange and mutual understanding.
