isbn:9780710628701

"Jane's Military Communications" provides all the data you need on the latest advances in communications and IT systems and equipment designed for, and fielded by, armed forces around the world. This authoritative resource contains detailed descriptions of each system's development programme; its operating parameters; how it works in battlefield conditions; its capacity to integrate with other systems plus, where applicable, frequencies; transmission rates; dimensions; power supply and environmental performance. "Jane's Military Communications" is the most comprehensive resource available, with over 2,000 entries and more than 2,500 images.
