Bats display astonishing ecological and evolutionary diversity and serve as important models for studies of a wide variety of topics, including food webs, biogeography, and emerging diseases. In "Bat Ecology", world-renowned bat scholars present an up-to-date, comprehensive, and authoritative review of this ongoing research. The first part of the book covers the life history and behavioral ecology of bats, from migration to sperm competition and natural selection. The next section focuses on functional ecology, including ecomorphology, feeding, and physiology. In the third section, contributors explore macroecological issues such as the evolution of ecological diversity, range size, and infectious diseases (including rabies) in bats. A final chapter discusses conservation challenges facing these fascinating flying mammals.

作者介绍:

Thomas H. Kunz is professor of biology and director of the Center for Ecology and Conservation Biology at Boston University. He is coeditor, most recently, of *Bat Biology and Conservation*.

M. Brock Fenton is professor of biology at the University of Western Ontario. He is the author of, among other books, *The Bat: Wings in the Night Sky* and *Bats*, revised edition.
