isbn:9781845332440

"Wonders of the Planets" takes us on a fascinating journey through our solar system. It pulls together all the latest discoveries and theories to present a revealing comparison of the Earth, our neighbouring planets and all the moons captured in their thrall. Each of the six superbly illustrated chapters covers a major and dynamic aspect of the planets, from the fury of their atmospheres to the devastating volcanic activity beneath their surfaces. With additional material on other planetary systems far away from our own, this book offers a fresh 21st Century perspective on the Earth and its place in the

solar system and beyond.

作者介绍:

Dr Raman Prinja is a Reader in astronomy and astrophysics at University College London (UCL) and conducts research on massive stars in our galaxy. He has been awarded the Pol and Christiane Swings research prize by the Royal Academy of Belgium. He is the author of Visions of the Universe and Understanding the Universe and has written a series of popular astronomy books aimed at 7 to 11 year olds.
