The only Intermediate Macroeconomics text to provide substantive content on the economic crisis. The current economic crisis is the worst since the Great Depression: the events themselves and the actions by the Fed and Treasury Department are equally unprecedented. Macroeconomics: Economic Crisis Update contains two brand-new chapters that directly address the crisis and present it in terms of the short-run models used in macroeconomics.

啃完它是我的目标。能看多少看多少

Another great intermediate level book, though Jones's notations are quite clumsy at times... As for teaching, I feel ambivalent towards skipping the old Keynesian stuffs.
