Presents the proceedings of the International Winterschool on Electronic Properties of Novel Materials, held in Kirchberg/Tyrol, Austria between 1-8 March 1997. The topic of the school and these proceedings is molecular nanostructures. The text has attempted to treat carbon nanostructures as a special case of molecular nanostructures, which also include silicon clusters, gold clusters and vanadium oxide tubes. The book aims to give an overview of the current status of fullerenes, carbon-nanotubes and related molecular nanostructures.
