Dyslexia research has been proceeding by quantum leaps. Great advances have been made in the past few years, and while many unanswered questions remain, we nonetheless do know a great deal about the causes and nature of the condition, and how teachers should treat it. This book, by two of Europe's leading experts, gathers together a vast amount of recent international research on the causes and remediation of dyslexia, and presents a cognitive model of the normal reading process and a process-analytic diagnostic model. Much of this material appears in English for the first time.
