Two distinctive approaches to the study of human demography exist within anthropology today: anthropological demography and human evolutionary ecology. The first stresses the role of culture in determining population parameters, while the second posits that demographic rates reflect adaptive behaviors that are the products of natural selection. Both sub-disciplines have achieved notable successes, but each has ignored and been actively disdainful of the other. This text attempts a rapprochement of anthropological demography and human evolutionary ecology through recognition of common research topics and the construction of a broad theoretical framework incorporating both cultural and biological motivation. Both these approaches are utilized to search for demographic strategies in varied cultural and temporal contexts ranging from African pastoralists through North American post-industrial societies. As such this book is relevant to cultural and biological anthropologists, demographers, sociologists, and historians.

评论

方法上蛮简单 思路上算是总括了 但是数据用的都是小样本
不过人类学本业不讲究什么推断倒是真的
想到了WU的一位导也是Demo和Anthro跨界的
不知道有谁拿当年萨摩亚的数据看过TFR没
