Like the other scientific romances treated in the Annotated H.G. Wells series, The War of the Worlds is a philosophical tale and as such is profoundly ideological. The world of the Martians represents the progressive future of humanity in a cultural war with our world of tradition and reaction -- these are the two worlds in question. To those familiar with Wells' works only through film, this acclaimed series annotated by the world's premier Wellsian scholar, Leon Stover, will be a real eye-opener. The historical, philosophical, and literary contexts of Wells' scientific romances are thoroughly examined. All editions are in library binding, with an introduction, appendices, bibliography and index.
