The Condition of Madness provides a comprehensive philosophical explanation of the conceptual assumptions in psychiatry. Brian Grant begins this work with a historical overview of psychiatry and a discussion of the prevalent views in the contemporary discipline. He then critically examines DSM-IV and argues that the taxonomical categories presently used in psychiatry are almost entirely arbitrary. The book draws on the philosophy of mind and provides discussions of the mind, the self, the will, and madness. It concludes with recommendations on how to view psychiatry and explores what the future holds for the discipline.
