This is the definitive handbook on corrosion, in an updated version from the classic 1948 edition. This new edition: offers global coverage, providing data on corrosion rates of steel in major river systems around the world and atmospheric corrosion rates in many different parts of the world, including polar regions. It presents the corrosion behavior of many new materials such as weathering steels and newer stainless alloys. It discusses major advances since the first edition, including the development of many nonmetallic materials, their corrosion behavior, and engineering approaches to their corrosion control.
