While other books cover general topics and various subsets of forensic anthropology, this one-of-a-kind reference compiles the best practices of policies, procedures, and protocols of different laboratories across the world. This book brings together experts in every aspect of forensic anthropology to consider physical plant demands, equipment needs, staffing, ethical issues, and the process of certification with the American Society of Crime Laboratory Directors. With examples of implementation, "The Forensic Anthropology Laboratory" also provides discussion of proven methods in skeletal preparation, laboratory flow, and specimen curation including processing logs and forms examples.
