"Magic Stones" documents, in stunning and evocative photographs, our ancestors' obsession with stone. Throughout Europe stone has been used to create dwellings for the living and the dead, as a canvas for our earliest art, to celebrate the heavens and in ways that are still, even today, beyond our understanding. From the sun-drenched temples of Malta and the great tombs and alignments of Brittany to the labyrinths of icy Finland, this fascinating book explores these stones in their landscape, as part of nature and as a powerful reminder that, thousands of years on, they still hold a certain

magic and mystery. This is the most wide-ranging photographic record of ancient European stone structures published to date. It is an inspirational celebration of the beliefs and achievements of our ancient ancestors. It features an authoritative introduction by leading archaeologist Julian Richards.
