How do the accomplishments that make us most deeply human – our capacity to think, to use language, to experience emotions, and to relate to one another – depend on our bodies? Exploring these issues involves laying aside an ancient Western tradition that placed body and mind in opposition, as well as more recent scientific understanding of thought as abstract, disembodied information processing. The chapters in this volume review current work on relations of the body to thought, language use, emotion, and social relationships, as presented by internationally recognized experts in these areas.
