isbn:9781583215371

Updated from the 1996 edition, this book offers useful methods of statistical analysis of

key criteria, with an emphasis on application rather than theory. Coverage includes forecasting approaches, sources of information for forecasting, curve fitting, water use coefficient models, causal/structural forecast models, forecasting seasonal and peak water demands, population and economic forecasts, effects of conservation, price, and weather. Includes CD-ROM with examples that support the methods.
