isbn:9780710628275

"Jane's Air Traffic Control" covers the many aspects of ATC operations including airspace management, airfield lighting and meteorology. It provides detailed, up-to-date information on the equipment and software used by airports and ATC authorities worldwide, including a market survey of the latest CNS/ATM technology, ensuring you can track developments and locate new ATC solutions. There is a complete list of manufacturers, their products and contact details, helping you to locate suppliers quickly and easily. The key contents include: ATC survey; major consortium programs; airspace management; airfield lighting and visual guidance systems; meteorology; noise monitoring systems; training and simulation equipment; system design, engineering and integration; operational and technical support; training services; civil aviation organizations and authorities; and air navigation service providers.
