This book takes general business accounting and financial principles as well as engineering economics and adapts them to the unique characteristics of the

construction industry. It provides all of the key financial management principles needed by construction managers under one cover, addressing how they are applied in the construction industry and how they interact. This book teaches students how to account for the company's financial resources, how to manage the costs and profits of a construction company, how to manage the company's cash flows, how to evaluate different sources of funding a company's cash needs, and how to quantitatively analyze financial decisions.
