Written and edited by leading emergency psychiatrists, this is the first comprehensive text devoted to emergency psychiatry. The book blends the authors' clinical experience with evidence-based information, expert opinions, and American Psychiatric Association guidelines for emergency psychiatry. Case studies are used throughout to reinforce key clinical points. This text brings together relevant principles from many psychiatric subspecialties—community, consultation/liaison, psychotherapy, substance abuse, psychopharmacology, disaster, child, geriatric, administrative, forensic—as well as from emergency medicine, psychology, law, medical ethics, and public health policy. The emerging field of disaster psychiatry is also addressed. A companion Website offers instant access to the fully searchable text.
