Since its founding in 1976, the non-profit Habitat for Humanity International has built more than 255,000 houses for more than one million people and families in need world wide. First published in 2002, "How to Build a House" has helped thousands more build simple, energy efficient homes of their own by helping guide them from

foundation to roof, through all interior finishes and fixtures. Written by long-time carpenter and Habitat volunteer, Larry Haun, this extensive revision features up-to-date information on residential codes, construction methods, and materials - as well as an updated design inside and out. Haun also provides new sections on tools, siding, ventilation, and landscaping. With clear information on everything from obtaining a site and permit to finishing touches like installing door locks and cabinets, this is the best single-volume resource for the beginning homebuilder.
