This is a volume in the Handbook of Clinical Neurology (Series Editors: Michael J. Aminoff, Department of Neurology, University of California, San Francisco, USA; François Boller, Bethesda, USA; Dick F. Swaab, Netherlands Institute for

Neuroscience, Amsterdam, the Netherlands) covering neuropsychology and behaviour. This volume concentrates on the three major developments that have helped shape the recent advances in this subject: the rise of interdisciplinary work in the cognitive neurosciences; the discovery and application of new tools to investigate neurochemical and neuroanatomical underpinnings of cognition; the wider and more focused use of neuropsychological testing in the characterisation of neurodegenerative conditions. As well as chapters on the advances in the basic mechanisms there are also chapters addressed to the clinician on how to approach the neuropsychological process.

A volume in the Handbook of Clinical Neurology series, which has an unparalleled reputation as the world's most comprehensive source of information in neurology. International list of contributors including the leading workers in the field. Describes the advances which have occurred in clinical neurology and the neurosciences, their impact on the understanding of neurological disorders and on patient care.
