Written by a team of 36 international experts in a variety of disciplines, this practical guide provides clinicians and surgeons with guidelines and step-by-step descriptions

of the latest techniques for managing critical limb ischemia (CLI). It combines the most recent scientific and clinical research in one comprehensive resource, and utilizes a multidisciplinary approach to combating this growing health concern. Key features of "Critical Limb Ischemia": ALL RESEARCH TO DATE from medical specialties and industry involved in CLI detection, evaluation, and management gives the reader the necessary background information to best treat patients HANDS-ON GUIDANCE provides practicing interventionalists with the latest CLI techniques that include both non-invasive and endovascular surgical procedures so they are well-equipped to handle unique and difficult situations HIGH QUALITY ARTWORK, including over 170 line drawings, radiographs, and figures, provides superior visual aids for achieving successful post-procedural outcomes RESULTS AND EVIDENCE for a variety of procedures, including PTA (percutaneous transluminal angioplasty) and stenting BTK (below the knee), prepares readers for possible surgical outcomes and complications A REVIEW OF CLI CLASSIFICATION SYSTEMS, highlighting new Trans-Atlantic Inter-Society Consensus (TASC) recommendations, keeps readers up-to-date
