This concise, hands-on text provides a method for making evidence-based decisions in practice. The book presents a step-by-step approach to mastering the five essential skills of evidence-based decision making-formulating patient-centered questions,

searching for the appropriate evidence, critically appraising the evidence, applying the evidence to practice, and evaluating the process. Five Case Scenarios are used throughout the book and cover the broad areas of therapy/prevention, diagnosis, etiology/harm/causation, and prognosis. Each chapter has objectives, suggested activities, a quiz, critical thinking questions, and exercises.
