Part archaeological detective story, part science, and part history, The Archimedes Codex tells the astonishing story of a lost manuscript, from its tenth-century creation in ancient Constantinople to the auction block at Christie's in New York, and how a team of scholars used the latest imaging technology to reveal and decipher the original text. What they found was the earliest surviving manuscript by Archimedes (287 BC-212 BC), the greatest mathematician of antiquity—a manuscript that established, for the first time, the extent of his mathematical genius, which was two thousand years ahead of modern science.
