With eye-popping illustrations and jaw-dropping facts on every page, these beginning portfolios of big beasts, crawly creatures, and man-made creations make perfect

windows to the huge world outside. The full-color, life-like portrayals of some of the earth's most wondrous things--both past and present--are so big and exciting that young children and early readers will want to revisit them again and again. Like a deep dive into the sea, this tour of marine life gives kids an upclose view of turtles, sharks, fish, crabs, and dolphins. Each double-page spread focuses on one animal with big, detailed photographs, size charts, and information on habitats, food, hunting, and caring for young.
