Starlight, star bright, first star I see tonight... For thousands of years, the night sky has been a source of profound fascination for people. Now you can learn to recognize the major stars and constellations—from Orion to Ursa Major — and understand how the night skies change with Star Gazer.

- This unique guide to the night time skies features an innovative fold-out touch-screen with fiber optic lights that illuminate stars and constellations at the touch of a button.

- The touch-screen shows four maps of the night sky, as it appears during each season. Each map shows both northern and southern hemispheres, and features a button that illuminates the major stars or constellations visible at that time of year.
- The accompanying 64-page book is packed with stellar information: star maps, illustrations, photographs, and details about the constellations, spread by spread.
- You’ ll learn how the planets and other objects such as nebulae, star clusters, and galaxies, work together to make up our universe.
- This out-of-this-world book is unlike any other on the market today — and will definitely appeal to millions of dedicated star-gazers around the world.
