Built-ins have wide appeal because they not only reduce clutter by offering attractive storage, they add permanent value to a house. At the same time, they are not difficult to build, being well within the skill level of any DIYer with basic woodworking skills. The challenges associated with this kind of building are like any on-site work - dealing with what's there, which can include walls out of plumb, uneven floors and other such

vagaries. Long-time how-to author Bob Settich brings a strategic approach to the topic, showing how to plan built-ins to fit both their function and the room in which they will be installed. Expert advice, trade secrets and custom options ensure professional-level results!
