This work offers a moving and evocative account of the arduous journey of the Arctic caribou. It offers dedicated mailing and e-mail campaign to targeted nature interest

media & organisations. Every year without fail, caribou from the Yukon and Alaska set off in early April to a small corner of the Arctic circle to birth to their young. The journey - an arduous ordeal of mountains and blizzards, ravenous wolves, scant forage, and river crossings with chunks of ice the size of pickup trucks - is the longest migration of any land animal on earth. Despite these formidable obstacles, the females find their way to the calving grounds, deliver their young, and begin the long journey home. "Arctic Circle" is a moving, evocative, and poignant account of this momentous journey, beautifully illustrated with stunning full-colour photography.
