One of the world's top chess annotators has selected 50 outstanding games from recent years and analyzed them in painstaking depth. Here he presents his findings to chess enthusiasts, who will find the games entertaining and the annotations both instructive and illuminating. Igor Stohl is an outstanding theoretical expert, so the opening phase of each game reads like a lesson in the key strategic aspects of the opening being played, with an up-to-date survey of current trends. The middlegame is dissected and the critical decisions subjected to scrutiny by an author who invites readers inside his laboratory to join him in his quest for the truth. The endgame phase, if reached, is handled with similar erudition, with insights into the grandmaster's approach to questions of technique. All chess players will be able to benefit from this step-by-step analysis of top-level games from some of the world's best players.
