"This is the long-awaited text on interdisciplinary treatment and assessment of, among other clinical topics, brain-derived behavioral, cognitive, and neurological disorders...."
--Niels Birbaumer, PhD University of Tübingen, Germany Member of the German Academy of Sciences, Leopoldina "Gone is the unidimensional approach of the expert summarizing a topic from a single vantage point. Instead, the content shifts laterally, embracing not only interdisciplinary expertise, but an integrative way of thinking that transcends each discipline....What makes the "Handbook" so refreshing is that this cross pollination of ideas and approaches is more than novel theorizing. It offers clinicians a new way forward." --Anthony Feinstein, MD, MPhil, PhD, FRCP University of Toronto To maintain the highest standards, allied health care practitioners must keep pace with evolving trends in diagnostics, interventions, and methodologies. This book supports clinicians by disseminating important perspectives, research, and procedures. It provides an integrative roadmap that fosters interdisciplinary cooperation. Key Features: Presents reviews of research on a broad selection of clinical disorders Includes a wide range of established and emerging diagnostic and intervention approaches Discusses viable evidence-based alternative treatment methods Critiques certain approaches, paradigms, and practices that may need to be revised Includes contributions from renowned psychologists, psychiatrists, and researchers Clinicians, researchers, and students will find this book a valuable source for interdisciplinary practice and research. It facilitates a sorely needed move toward integrative practice in an era in which specialization pervades.
