On December 26, 2004, giant tsunami waves destroyed communities around the Indian Ocean, from Indonesia to Kenya. Beyond the horrific death toll, this wall of water brought a telling reminder of the interconnectedness of the many countries on the ocean rim, and the insignificance of national boundaries. "A Hundred Horizons" takes us to these shores, in a brilliant reinterpretation of how culture developed and history was made at the height of the British raj.

评论

"Interregional arena" beyond the abstract global and the fragment local. Problematic and wishful presentation of "universalist aspiration."
