For first-year Computerized Accounting or upper level Accounting Information courses Brunsdon, Romney, and Steinbart have once again teamed up to expand students, AIS skills beyond typical reporting and basic transaction posting by placing them in the

pilot,s seat of Microsoft Great Plains. This text is designed to illustrate the practical applications of the theories in an accounting information systems course by encouraging students to experience the software "hands on". In conjunction with the materials found in an accounting information systems text such as, Accounting Information Systems by Marshall B. Romney and Paul John Steinbart, this method of Great Plains training will cement a solid foundation of accounting software skills for your students. The second edition of this textmaintains the same integrated approach of accounting information systems as the first, while also detailing the updated Great Plains version 10.0 and providing more step-by-step guidance for students.
