In 2001, Kenneth Deffeyes made a grim prediction: world oil production would reach a peak within the next decade - and there was nothing anyone could do to stop it. Deffeyes' claim echoed the work of geophysicist M. King Hubbert, who in 1956 predicted that U.S. oil production would reach its highest level in the early 1970s. Though roundly criticized by oil experts and economists, Hubbert's prediction came true in 1970. In this updated edition of "Hubbert's Peak", Deffeyes explains the crisis that few now deny we are headed toward. Using geology and economics, he shows

how everything from the rising price of groceries to the subprime mortgage crisis has been exacerbated by the shrinking supply - and growing price - of oil. Although there is no easy solution to these problems, Deffeyes argues that the first step is understanding the trouble that we are in.
