Transplantation Pathology is a specialized textbook that comprehensively covers the pathological features of all organs transplanted in clinical practice. It discusses the

complications affecting transplants with a clinicopathological correlation to all processes. In addition to extensive detail of morphological changes, numerous images, and the latest classification schemes, it incorporates the basis pathophysiologic mechanisms involved in the detrimental processes affecting the host and graft. Chapters address the immunopathology of graft rejection, lab medicine and transplantation, dermatological complications in transplantation, and PTLD. This book by renowned authors in the field provides the pathologist, clinician, clinical staff, and student a complete overview of the pathological processes and underlying mechanisms of all areas of transplantation.
