"The Earth-Sheltered House" is a classic in the annals of sustainable building books, written by a legend in the field of environmentally responsible architecture. Malcolm Wells has a fundamentally different way of looking at the design and building process, and his iconoclastic perspective has never been more apparent. Wells' work is revolutionary, but readers will find his message to be pure common sense. Earth sheltering offers superior comfort with minimal energy input, and it is adaptable to diverse terrains as well as a variety of architectural aesthetics.
