This first comprehensive overview of the modern aspects of biomineralization represents life and materials science at its best: Bioinspired pathways are the hot topics in many disciplines and this holds especially true for biomineralization.

Here, the editors - well-known members of associations and prestigious institutes - have assembled an international team of renowned authors to provide first-hand research results.

This third volume deals with biomineralization in medicine, paying closer attention to bones, teeth and pathological calcifications.

An interdisciplinary must-have account, for biochemists, bioinorganic chemists, lecturers in chemistry and biochemistry, materials scientists, biologists, and solid state physicists.
