This volume discusses diagnosis, therapy, and prognosis of Gastrointestinal cancers. Various aspects of esophageal cancer, gastric cancer, and pancreatic cancer are included. The emphasis is placed on the methodologies used for diagnosis, therapy, and prognosis of these cancers. Molecular mechanisms underlying these cancers are explained. Evaluation of FDG-PET/CT fusion imaging, endoscopic ultrasound and imaging, and the role of microRNA in prognosis, are discussed. Also, the classification of colon and gastric histological samples is detailed. Treatments, including radiofrequency ablation and surgical debulking, endoscopic submucosal dissection, laparoscopic gastrectomy of gastric cancer and pancreaticoduodenectomy are explained in detail. The use of radiotherapy and chemotherapy for pancreatic cancer patients is also explained. A large number of imaging modalities for diagnosing these cancers and assessing the treatments are discussed.
