In a small bio-tech lab, a group of scientists have uncovered the secret to longevity in one family's genetic code. But they are missing one crucial factor: a living tissue sample from a newborn who possesses the coveted "infinity gene." With time and money running out, the researchers will stop at nothing to get their hands on the infant whose genetic makeup is worth billions. Sally Benedict, editor of a small-town newspaper, is thrilled to be pregnant - until a series of grave robberies turns her world upside down. When Sally uncovers a link between the grave robberies, herself, and her unborn child, she knows that there is no one she can trust - not her family doctor, not her obstetrician, not anyone in the medical profession.
