This book offers introductory entries on 80 ideas that have shaped the study of language up to the present day. Entries are written by experts in the fields of linguistics and the philosophy of language to reflect the full range of approaches and modes of thought. Each entry includes a brief description of the idea, an account of its development, and its impact on the field of language study. The book is written in an accessible style with clear descriptions of technical terms, guides to further reading, and extensive cross-referencing between entries. A useful additional feature of this book is that it is cross-referenced throughout with Key Thinkers in Linguistics and the Philosophy of Language (Edinburgh, 2005), revealing significant connections and continuities in the two related disciplines. Ideas covered range from Sense Data, Artificial Intelligence, and Logic, through Generative Semantics, Cognitivism, and Conversation Analysis, to Political Correctness, Deconstruction, and Corpora. Features: * The only single-volume reference book to focus specifically on ideas from both linguistics and the philosophy of language * Accessibly written for use at all levels, including undergraduate, postgraduate, academic, and other general readers in the fields of linguistics and the philosophy of language * Extensively cross-referenced both within itself and with Key Thinkers in Linguistics and the Philosophy of Language to provide a unique reference resource.
