This work comprises papers based on some of the talks presented at the IUTAM Symposium of the same name, held in Cape Town, January 14-18, 2008. This volume treats cutting-edge issues in modeling, the behavior of various classes of inelastic media, and associated algorithms for carrying out computational simulations. A key feature of the contributions is works directed at modeling behavior at the meso and micro-scales, and at bridging the micro-macro scales.
