"Offers a mathematical introduction to non-life insurance and, at the same time, to a multitude of applied stochastic processes. It gives detailed discussions of the fundamental models for claim sizes, claim arrivals, the total claim amount, and their probabilistic properties...The reader gets to know how the underlying probabilistic structures allow one to determine premiums in a portfolio or in an individual policy."

第一本因为闲而看完的学术书。。。源于上火车前太着急就拽了这本书。。。不过发现还是讲的很通俗的，作者写作的风格我比较喜欢，能讲很多想法，不严格的说一些事情，如果想要关注insurance mathematics，是非常好的一本启蒙教材。
