The cross-fertilization of physico-chemical and mathematical ideas has a long historical tradition. This volume of "Advances in Chemical Engineering" is almost completely dedicated to a conference on 'Mathematics in Chemical Kinetics and Engineering' (MaCKiE-2007), which was held in Houston in February 2007, bringing together about 40 mathematicians, chemists, and chemical engineers from 10 countries to discuss the application and development of mathematical tools in their respective fields. This work: updates and informs the reader on the latest research

findings using original reviews; is written by leading industry experts and scholars; and, reviews and analyzes developments in the field.
