Making a significant contribution to the international debate on social inequality and a valuable student resource, this book challenges the reader to think beyond commonly accepted theories. Sociologists used to seek out social inequality in the slums and factories of big Western cities. Jan Pakulski argues that we are now living in a world where inequality is global, extending beyond national borders in the context of the worldwide circulation of capital, products, people and ideas. "Globalising Inequalities" is a broad introduction to traditional and contemporary theories of social inequality set in the context of current debates and trends. It argues that social inequality is hybrid and rapidly changing in a globalized world, and analyses inequality on global, national, local and domestic levels, stressing the interdependence between them.
