Engage students with enriching scientific inquiry and process skills. National Science Education Standards are integrated into easy-to-use, inquiry-based activities. Each lesson connects student learning to real-life applications in life science, earth and

space science, and physical science. Students will explore science process skills in predicting, data collection, observing, investigating, hypothesizing, and more. Topics for kindergarten and first grade students are divided into units focusing on Sink and Float, Soil, and The Five Senses. With the "Inquiry Science" series, your students will explore, discover, explain, and understand great science
