All papers in this volume were peer-reviewed. This book represents recent cutting-edge developments in low temperature physics, reported at one of the largest international conferences in physics. The subjects covered are superconductivity, magnetism, quantum gases, quantum liquids and solids, electronic properties of solids, low-temperature experimental techniques, cryogenics, and applications. This proceedings volume comprises 770 peer-reviewed papers and serves as a valuable tool for researchers and graduate students who wish to have a broad overview of the current developments in these fields.
