Woodn't it be nice if all houses used wood this beautifully? * Case studies plus photos and floor plans * Showcases the finest wood houses from around the world The architects featured in "Small Wood Houses" have used the richness, the texture, and the strength of wood to enhance their creations. Thought the spaces are small, space and light are maximized, superfluous elements are minimized, and the warm, sophisticated qualities of wood shine through. And here's the best part: Wood is environmentally sustainable. These remarkable case studies, illustrated with full-color photographs and floor plans, are expertly explained by the architects who created them.
