Biotechnology and Pharmaceutical Patents: Law and Practice is a comprehensive, how-to guide for protecting BioPharma inventions. This practice-based resource applies the law in the context of BioPharma patents as business assets, helping you to maximize their value and ensure their protection.

The material is designed to be easily accessible and immediately applicable to any BioPharma patent issue you may be facing. Biotechnology and Pharmaceutical

Patents is arranged topically so that you can go straight to a specific section to answer a particular question. And this practical resource provides specific strategies for protecting proprietary intellectual property, including patentable inventions, data exclusivity, trade secrets, know-how, databases, data collection, and business plans.
