The amount of digital information that libraries need to manage effectively for the benefit of users is constantly increasing. This book discusses in detail how library administrators can better handle this growing abundance of information, as well as effective ways to allow library users easy access. Respected leaders in the field of librarianship explore various aspects of how librarians are meeting the challenges of delivering more digital information to a changing user base, including preservation demands, licensing agreements, digitizing and making available collections unique to specific libraries, and providing more personalized digital services to library users. This book focuses on timely issues that impact how libraries are administered and viewed by both librarians and by users. This innovative book discusses practical ways to provide remote access and services to digital resources, support the preservation of digital resources, understand their library users who prefer the digital information format, and reshape the traditional library for better digital access. The book is carefully referenced and includes helpful illustrations. The book is a valuable resource for senior and mid-level library administrators, including deans, directors, and department heads, of public, special and academic libraries. This book was published as a special issue of the Journal of Library Administration.
