"Awakening to World Disorder and Climate Realities is a powerful chronicle that efficiently explodes closely held delusions in an onslaught of blunt reality. Because orthodox political and economic analyses only examine the subsets of the focal topics in this thoroughly researched study, they lack the objectivity and scope to portray our post-modern world accurately. Awakening... is brutally honest and, for your own good, doesn't dare hold anything back." Michael Clarke, the author Awakening... is an earnest and comprehensive search for global truths and universal solutions. It's a connect-the-dots detective story wherein the citizen chronicler strives to resolve the paradoxes which suddenly become so evident every single time we look too closely at our real world's political, social and economic disorders or seriously contemplate the realities of resource depletion, pollution, climate destabilization and species extinction. This treatise ultimately provides an evolutionary psychological paradigm for the universal resolution of the widespread subconscious delusions which empower pandemic apathy and prolong society's supreme irresponsibility in the face of dire social and environmental threats humanity no longer has the luxury of ignoring. Awakening... formulates a Gaian environmental and social alternative to the misanthropic status quo and incites a revolutionary evolution to ensure humanity's deliverance from sociopathic tyranny for once and for all. Catch this lifeline now and begin your evolutionary journey, because to be oblivious to the realities of this world is to be actively complicit in its social and environmental destruction, and that's just no longer acceptable. The proceeds from the sale of this book will support The Jamaica Project - a private, non-profit, personal direct aid provider that has been in eco-social operation since 1989 globally recycling necessities where they have the greatest potential to alleviate undeserved hardship and directly help impoverished women and children in developing countries who are incessantly struggling with precarity and increasing climate destabilization.
