Focusing on the skills that are the most labor intensive to learn and that pose the greatest risk to patient safety, this online course is the perfect tool to help you review

and evaluate your competency before performing skills in the clinical setting. This one-of-a-kind online course includes 17 modules with each module comprising several lessons. Each lesson provides you with a variety of interactive exercises and self-check activities that allow you to test your comprehension and ask you to apply concepts. You can also view the video for each skill from start to finish, pausing and repeating segments as desired. Each lesson includes an exam that can be scored immediately, with feedback that provides the rationale for the correct answer, and each module concludes with a test.
