This title provides 32 extensively detailed extensions. Featured architects include Alison Brooks, 3RW Architects, Bob 361 Architects, Plasma Estudio and Herrman & Koch. The extension projects gathered together in this book have been executed on country houses and urban dwellings, temporary and permanent residences; they have been built in gardens, attics, patios, inner courtyards, backyards and even in the air. Extensions of a durable type and entirely temporary additions, containing anything from a single utility or service room to a complete residence; all of these ventures are thoroughly documented at every step of the design process, both technically and graphically, from conception to completion. Comments from the architects themselves are also included, making the end result an inestimably ingenious instrument for all sorts of professionals, architecture students and anyone else concerning themselves with interior design, furnishing and decoration.
